

Valet App — Feature Guide

A tour of what the valet operations system does, day to day and behind the scenes.

Overview	Dashboard
Check-in (New Entry)	Customers
Quick Pickup	Reports
Pickup Queue	Settings
Active Cars & Checkout	Customer ticket page
Bags — hands-free shopping	Other capabilities
Car wash	Tech stack

Overview

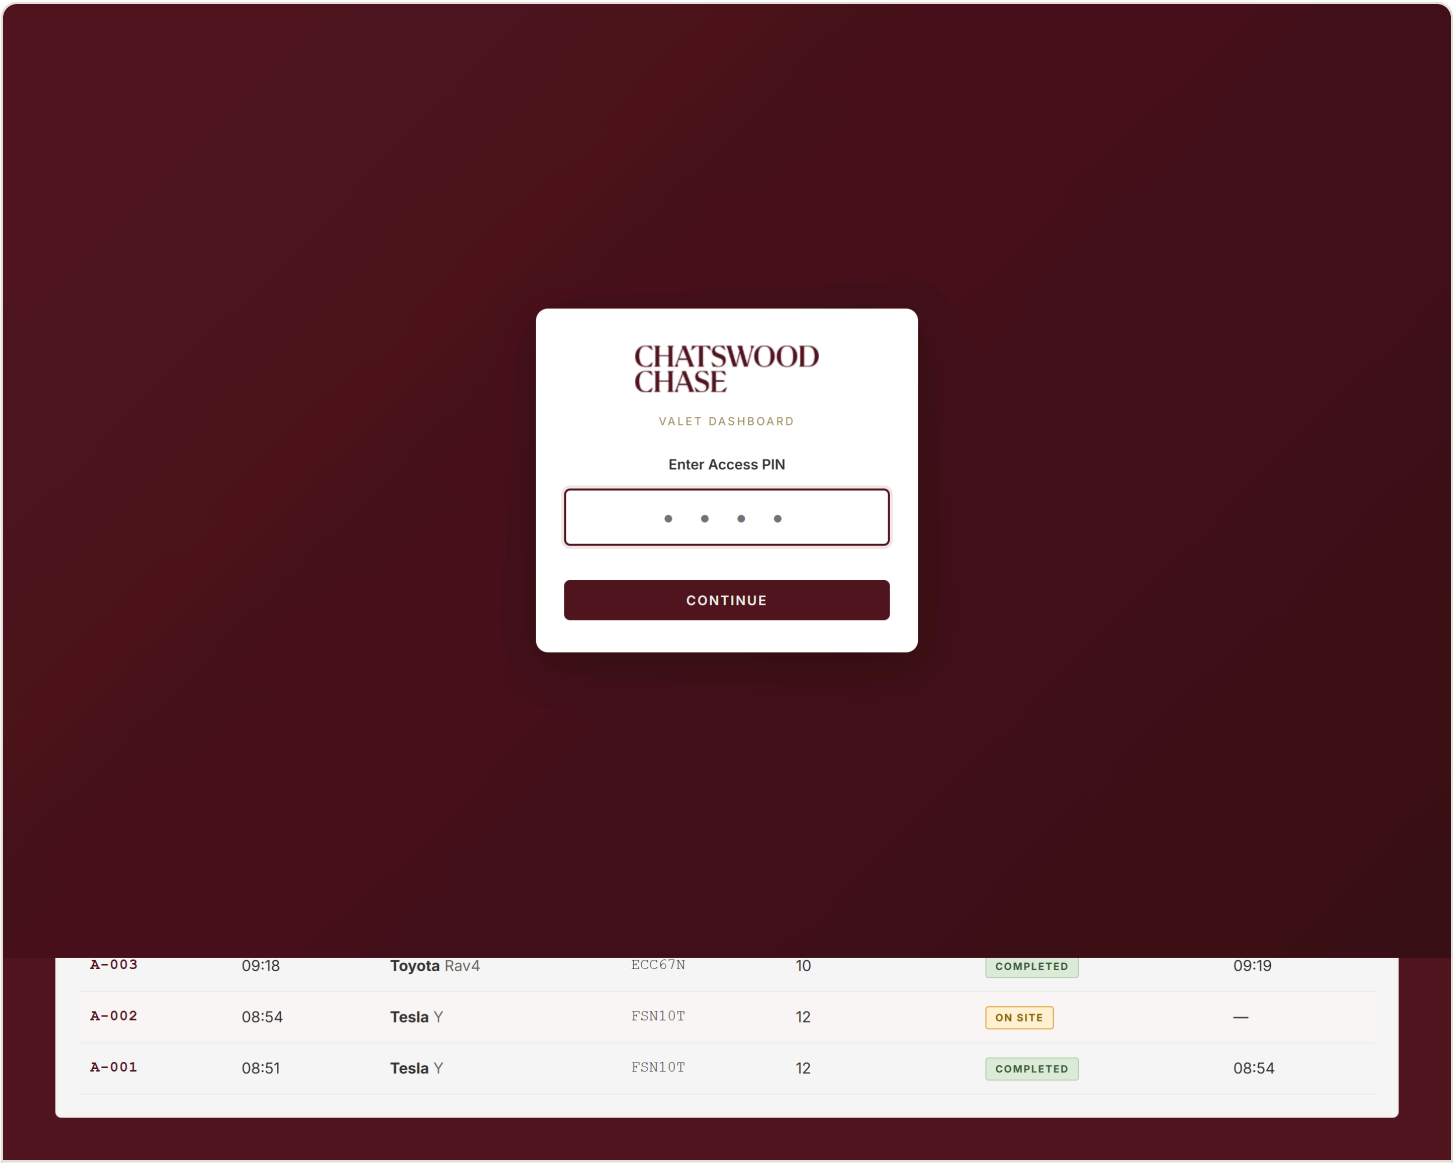

The Chatswood Chase valet app is a single web-based dashboard that runs the entire valet operation — check cars in and out, take payment, print key tags, text customers their ticket, run hands-free shopping and car wash add-ons, and give management live reports. It runs on every device at the stand (counter PC, tablets, staff phones) and stays in sync in real time.

Cloud-synced
Every device shares live data — a car logged on one screen appears everywhere else within seconds.

Works offline
Keeps working if the internet drops, then syncs automatically once it's back.

Installable
Adds to a tablet's home screen and runs full-screen like a native app.

Per-staff logins
Every attendant signs in individually, so parking and returns are credited correctly.

Login — each staff member signs in with their own account.

Check-in (New Entry)

The drop-off form. Ticket number and time-in fill automatically.

CLEAR

New Entry — the check-in form, including the optional car-wash picker and the tap-to-mark damage diagram.

- Captures customer name, phone (for the SMS ticket), car brand/model/colour, parking bay, and number plate — typed or read automatically with the camera (plate OCR).
- **Damage diagram** — tap the car outline to mark existing scratches/dents before parking. If the plate has been seen before, the last visit's marks pre-load automatically so staff can confirm or update them.
- **Charge to shop**, **VIP** flag, **car wash add-on**, and free-text notes, all on the same form.
- Optional photo + GPS capture at drop-off.
- Saving auto-prints the key tag, texts the customer their QR ticket link, and puts the car on Active Cars / Dashboard everywhere instantly.

Quick Pickup

Fast lookup to return a car: scan the key tag / QR ticket, or search by ticket, name, plate or bay from the top-bar search on any screen.

Quick Pickup — search or scan to find a car instantly.

Lost ticket? A dedicated flow lets staff find the car by customer details, log the identity check, then release — recorded against their login.

Pickup Queue

When a customer asks for their car ahead of time, it goes in the queue with an ETA countdown that changes colour as it gets closer to due (and flags overdue in red). Status can be pushed live to the customer's ticket page — "on its way" or "ready at the desk".

✓ MARK OUT · \$20.00

Queue — requested cars sorted by urgency, with a colour-coded countdown.

The full working list of everything on site — ticket, customer, plate, brand, bay, time in, running duration (colour-coded) and fee.

Per-row actions: call the customer, resend the QR ticket, reprint the key tag, edit details, log a bag pickup, add/manage a car wash, view/edit damage marks & notes, put the car in the queue, or check it out. An overstay banner flags any car left overnight or past a configurable hour threshold.

Checkout & payment

- Card / Cash / EFTPOS / Other, Unpaid, Complimentary, or Charge to shop/account
- **Level 1 promotion** — free valet & parking against a validated shop receipt
- Store validations and %/\$ discounts
- Tips and fee overrides
- **Square Terminal** integration — send the charge to a paired card terminal; a successful charge auto-checks the car out
- A mandatory **return condition** check (clean vs. new damage/incident, with customer acknowledgement) logged for the record

Bags — hands-free shopping

Customers leave purchases at stores; valet collects everything and loads the car while it's parked.

✓ Requested

2 Collecting

3 In car

4 Done

Bags — each job with its store, bag count, and the requested → collecting → in car → done tracker.

- Jobs move through **requested** → **collecting** → **in car** → **done**; a car can have several rounds running at once (one per shop), each tracked separately.
- Any staff member can claim a job, or on desktop a job can be **assigned to a specific staff member** — it rings/vibrates their phone with an alert (plus an OS notification if the app is closed).
- A proof photo is taken in the car when bags are loaded and sent to the customer.
- Both the collector and the loader are credited separately in reports.

Car wash

Valet can add an on-site car wash from Xstream Car Care and bill it on the same valet ticket.

Help & Manual

CAR WASH — XTREAM COSTS

The customer pays the retail price (shown for reference). Enter your wholesale cost — what you owe Xstream per wash — so the Car Wash report can show your margin. Leave a cost blank if it isn't agreed yet. Synced to all devices; applied to new washes from now on.

SERVICE	RETAIL \$	YOUR COST \$	RETAIL L	YOUR COST L
Xstream Wash	\$75.00	45	\$95.00	55
Hand Polish	\$100.00	60	\$130.00	80
Interior Detailing	\$195.00	120	\$245.00	150
Semi Detailing	\$250.00	160	\$320.00	210
Full Detailing	\$295.00	200	\$420.00	300

SAVE CAR WASH COSTS

Settings — Car Wash — wholesale cost per package feeds the margin report.

- Add a wash at check-in or any time while parked; pick package + size (small/large) and the price fills in automatically.
- Track the car's wash status (taken to wash → washed, back) right from Active Cars.
- Wholesale cost per package is set in Settings so the Payments report shows what's owed to Xstream and the margin kept, separate from parking revenue.

Dashboard

The at-a-glance view of the day for managers and staff alike.

TICKET NUMBERING

Tickets are generated automatically as a random 6-character code with **3 capital letters and 3 numbers** (for example **K7M2QX**). The letter **O** and the digit **0** are never used, so codes can't be misread on a key tag or over the phone. Every code is checked to make sure it hasn't been handed out already.

KEY-TAG PRINTER

PRINTER

BIXOLON SPP-R200III — Bluetooth receipt (phone/tablet)

☐ **Use this device as the Print Station.** Turn this ON only on the computer wired to the printer. It will automatically print a key tag whenever *any* device checks a customer in — so staff can intake on their phones and the tag prints here. Leave it OFF on phones.

Print the key tag (ticket #, bay, plate + scannable barcode) straight to a BIXOLON SPP-R200III. Because this is a web app, a small free bridge app must run on this device:

One-time setup on this device:

- Android:** install "**mPrintServer**" from the Play Store. **Windows:** install the Web Print SDK utility from BIXOLON's SPP-R200III download page.
- Pair the SPP-R200III to this device over Bluetooth, then add it in mPrintServer and give it a **name**. In its **Web Server** settings make sure the server is ON (port 18080).
- Type that exact name below, Save, then tap **Test Print**.

PRINTER NAME (AS SET IN WEBPRINT APP)

e.g. Printer1

CONNECTION

HTTP (default)

BRIDGE ADDRESS (ADVANCED)

127.0.0.1:18080

Leave Connection on **HTTP** and address as **127.0.0.1:18080** to start. If printing is blocked because this site is **HTTPS**, switch the WebPrint app to its secure mode and pick **HTTPS** here (adjust the port if it differs).

SAVE PRINTER

TEST PRINT

CUSTOMER SMS CREDIT

Customers are auto-texted their ticket link on check-in via ClickSend. If the ClickSend balance runs out, texts silently stop (the app falls back to opening your Messages app). Check it here and top up at dashboard.clicksend.com when it's low. You'll also get a warning banner at login whenever credit is low.

CHECK BALANCE NOW

DATA MANAGEMENT

Your data is stored locally in this browser. Back it up regularly by exporting to CSV or JSON. If you clear your browser data or use a different PC, you'll need to import the backup.

↓ EXPORT FULL LOG (CSV)

↓ EXPORT BACKUP (JSON)

↑ IMPORT BACKUP (JSON · REPLACES ALL)

↑ MERGE IMPORT (ADD RECORDS)

Danger zone: Clearing data is permanent and can't be undone.

■ CLEAR ALL DATA

Settings — manager-level configuration for the whole system.

Other configurable programs (default off, enabled per centre as needed):

- **Loyalty program** — every N paid valets earns the next one free, auto-applied at checkout.
- **Multi-centre support** — the app can be cloned to a new site from one central config block, for rollout beyond Chatswood Chase.

Customer ticket page

Every customer gets a link (texted at check-in) to a live ticket page showing their car's status and a QR code, with a spot to leave a star rating and feedback after pickup.

Show this QR code to our valet staff when you return for your car.

💡 Tip: take a screenshot or bookmark this page so you can find it later.

Customer ticket — live status, QR code, and post-pickup feedback.

Other capabilities

- **Number-plate OCR** — camera-read plate at check-in, cloud recognition with an on-device offline fallback.
- **BIXOLON key-tag printing** — auto-prints on check-in via a local bridge app; one-tap reprint anytime.
- **ClickSend SMS** — automatic QR ticket text on check-in, and status pushes from the queue.
- **Square Terminal payments** — in-person card charges from checkout, tied to a per-device terminal ID.
- **Cloud photo storage** — bag/car photos are stored in cloud storage rather than the database, keeping the app fast as photo volume grows.

Tech stack

- Single-file web app, hosted on GitHub Pages
- Backend: Supabase (database + authentication + file storage + serverless functions)
- Integrations: ClickSend (SMS), Square (card payments), BIXOLON (key-tag printing)
- Timestamps stored in UTC, always displayed in Sydney local time

Chatswood Chase Valet App — feature guide. For full day-to-day staff instructions, see the Staff & Manager Manual.
